

PITCH QUALITY SUPPORT PROGRAMME UEFA EUROPA LEAGUE FINAL, PUSKAS ARENA, BUDAPEST, 2022/2023

“A great playing surface is difficult to achieve at the Puskas arena in Budapest. During four months of the year, the roof structure ensures that there is total shade across the pitch. The venue also faces extremes of temperature throughout the year, with extremely cold winters and stifling heat in the summer. We had to be aware of the latter around the time of the final since disease pressure was high. With a collaborative effort, we managed to produce a 5-Star playing surface for the final, which received plaudits everywhere. Congratulations to all involved in this successful project. It was a pleasure to be part of it.”
